Seeded Defect Log

Seeded Defects

Defect Number	Defect	Output Before Seeding	Output After Seeding	Suggested Corrections	Severity
1	Access search page without login	User will be redirected to the home page if have not signed in	Everyone can access to search page directly type in the URL	Remove the search routing in the router switch if user did not log in	1
2	Redirection fails after user logout	Users will be redirected to homepage after they logout	Users cannot go back to homepage after logout	Add redirect routing when user log out.	1
3	Redirection fail after user account is deleted	Users will be redirected to homepage after they delete their accounts	Users cannot go back to homepage after their accounts are deleted	Add redirect routing when user information does not exist.	1
4	Repeating recipe will be added if clicking more	Five new recipes (if any) will be added to the recipe table every time when user clicks "more" button.	The first five recipes will be added repeatedly when user clicks "more" button.	Update the index for retrieval so that the next five new recipes will be fetched.	2
5	Ingredient does not display correctly	Ingredients will display correctly even if switching between different routing	Ingredients will not update on the front end without refreshing	Add a componentDid Mount function and update the tag state variable.	2
6	Duplicate ingredients could exist	User will be notified they can't add the already existed ingredient	User can add the same ingredient	Add an if condition to check if duplicate	2

7	Deleting ingredient does not work correctly	The deleted ingredient will not show up if the page is refreshed	The deleted ingredient will still show up if the pages is refreshed.	The database has not been updated when user deletes the ingredient.	1
8	Signing up with Facebook or Google does not send verification email to the user	After a user signing up with Facebook or Google account, a verification email should be send to the user email grabbed from the oauth.	After a user signing up with Facebook or Google account, a verification email is not sent.	When Accounts.onCreateUser(), send the verification email to the user	1
9	Cancel like button does not work	The user can cancel the like after he/she likes the recipe.	The user cannot cancel the like after he/she likes the recipe.	Add the onClick event for cancel like	2
10	Password validation fails	The account should not be created with password length less than 6.	The account can be created with password length less than 6.	Add the condition to restrict the password length to be at least 6.	2
11	Health level filter for search is not functional	The recipes can be filtered out based on the health level based on what user chooses.	The recipes are not filtered with the health level on what user chooses.	Add the health condition in the URL sent to the API	2
12	Password validation fails when changing the password	The account should not be changed with password length less than 6.	The account can be changed with password length less than 6.	Add the condition to restrict the password length to be at least 6.	2

13	The recipe can be saved multiple times without notification.	One recipe cannot be saved multiple times; It can only be saved once.	The user can save a recipe multiple times without notification.	Change the way to update the DB by changing push to addToSet in order to avoid save duplicated recipes.	2
14	User cannot like the comment.	The user can like the comment by clicking the thumb up button.	There is no reaction after user clicks the like button of a comment.	Add the Click like function to enable user to like the comments.	1
15	User cannot save the comments after editing	User can save the comment after editing.	User can't save the comment after editing. There is no reaction after user clicks the save button after editing.	Add the Save function to enable user to save the comments after editing.	1
16	Full detail page link does not work	User can be redirected to the full detail page if he/she clicks on "See full detail" button.	The redirection to full detail webpage is nowhere.	Delete the redundant 'https://' in the detail URL.	2
17	Removing comments does not work	User can remove the comment he/she made before.	There is no reaction after user clicks the remove button of his or her own comments.	Add the remove button function to enable user to remove the comment he/she made.	1
18	The view count increments with a wrong number	The view count will only increment by 1 as the user views the page each time.	The view count will increment by 5 instead of by 1 each time the user views the page.	Change increment by 5 to by 1 to the view count as user views the page every	3

				time.	
19	Extra letter 'r' at the end of the title of every recipe	The title is correct	The title always ends with an extra 'r'	Remove the extra letter 'r' from the title	3
20	Search and profile page routing are switched.	Search page will render when user clicks on Search and Profile page will render when user clicks on Profile	Profile page will render when user clicks on Search and Search page will render when user clicks on Profile	Exchange the position of redirection between Search and Profile.	2
21	Each recipe has an extra tag	Each recipe has corresponding tag based on the information returned by the API call.	Each recipe has an extra tag showing "poisonous" on its detail page.	Remove the "poisonous" tag during rendering.	2
22	"Chocolate" exists in all user's ingredients.	User's ingredients are shown based on user's input.	User's ingredients always have "chocolate" and it cannot be removed.	Remove "chocolate" from front end code for rendering tags.	2
23	Email incorrect on Profile page	Email is correct on Profile page	Email is missing "@" on user's Profile Page.	Remove the line that removes '@' from the email	3
24	The like count on Saved Recipe page is incorrect	The like count will display the number of like correctly	The like count will always be 0 on Saved Recipe Page.	Change the like count displayed on the frontend to the actual like count.	3
25	The shopping cart does not display correctly	The shopping cart will show up if user does not have the ingredient.	There is no shopping cart even though the user doesn't have	Display the shopping cart after each ingredient which user	2

			the ingredients	doesn't own on his/her profile page.
